

Modular automated media packaging line PRESTO

Presto

- Consists of 5 modules
- Can work semi- and also fully automatically
- Packs up to 30 cases per minute
- Stand-alone packaging system
- Increases operators efficiency up to 500%

About the Presto line

The Presto Line of automated stand-alone packaging systems is a highly efficient modular solution to automate all phases of media packaging.

Each module can be used independently in a semi automatic capacity, or all modules can be utilized in conjunction to fully automate the entire packaging line. A complete fully automated line consists of five modules. The modules are:

Case Opener and Presenter, Slipsheet Inserter, Disc Placer, Booklet Placer, and finally a Case Closer Module.

The Presto Title Sheet Inserter

The Presto Inserter Inserts title sheets into the cases. Up to 600 title sheets are loaded into the Inserter Hopper.

Cases are fed into the inserter one title sheet is loaded under the clear film of each case prior to ejecting cases from the side of the system.

The cases can be fed in a semi automatic capacity by an operator, or in a fully automatic capacity by the Case Feeder Module.

The Presto Case Feeder

The Case Feeder can be positioned in line with the Presto Inserter to automatically open and insert each case into the Presto Inserter.

Closed cases are loaded into a hopper. The system opens each case and inserts them into the Presto Inserter automatically. An extended in-feed hopper accommodates approximately 200 cases at a time.

Presto Disc Placer

Discs are loaded on industry standard spindles into the Disc Placer Module. Cases dropped onto the Presto Disc Placer conveyor are indexed to the disc placing position where one disc is placed into each case in any of the standard hub positions.

Multiple Presto Disc Placers can be positioned in line to place any number of discs into each case.

The Presto Disc Placer can also be used to place discs in CD Jewel Cases, Cardboard DigiPack Trays.
